

WORKBOOK—SECTION TWO

Designing Your AAA Sequence

Use this section to map AAA at both scales: the full experience and the next lesson.

Name of Experience / Module / Pipeline:

Stage 1: Application

7. What real thing will the learner touch, test, make, or play with immediately?

____ The learner will immediately examine and test clues from Muffin's lab to figure out why she was captured.

8. What productive friction do you want them to encounter here? What misconception should fail safely? ____

The learner may assume Muffin's clues have an obvious answer, but testing them will show that first impressions can be misleading. The goal is for them to safely make mistakes, rethink their assumptions, and try again.

Stage 2: Action

9. What are the 3-5 core concepts, definitions, or moves that should arrive only after Stage 1?

109

Critical thinking and questioning assumptions

- Evidence-based reasoning
- Identifying patterns and clues
- Testing hypotheses
- Learning from mistakes and revising ideas

10. How will the learner use those ideas to refine what they already began?

____The learner will use the new concepts to re-examine Muffin's clues, test their original ideas, and develop a stronger explanation of what happened.

Stage 3: Amplification

11. What bigger frameworks, professional practices, or collaborative contexts will open here?

__Learners will explore real-world problem-solving, teamwork, evidence-based decision-making, and how professionals investigate complex problems together.

12. How does AAA work at the macro scale of the full experience and at the micro scale of one lesson or node? __At the **macro scale**, AAA guides the learner through Muffin’s full journey: **Act** → **Analyze** → **Apply**, repeating as the story and challenges become more complex. At the **micro scale**, each lesson follows the same cycle—learners take action, analyze what happened, and apply what they learned to the next challenge.
